

Project: BP Todo List Plugin

Wbcom Designs is building a plugin namely: **BP Todo List Plugin** which will add an extended feature to the big name: “**Buddypress**” that will allow any Buddypress Member to add a task to their todo-list and manage them accordingly.

FUNCTIONALITY

Buddypress

We'll install and configure Buddypress for a social network. Users will be able to register for an account on the site.

Once their account is registered and activated, they'll be able to view their own and other users account. They'll be able to create tasks from the 'Todo' tab that they'll get on their profile menu. They can create a task list by clicking on the sub-tab 'Add' just by filling in the details like:

1. Todo Category (category to which todo belongs)
2. Todo Title (todo title, help the user to identify the task)
3. Todo Summary (a short description of the todo regarding what the added task is all about)
4. Todo Due Date (the finish up date of the todo)

Once they fill up all these details, a task will be created in the task list that is viewable by clicking on 'Todo List' in the sub-menu.

They can manage any task on that page.

BASIC FUNCTIONALITIES PER TASK

There are some basic functionalities provided per task:

1. “Edit” – This will allow the user to edit the details of the tasks that they have added and update the task.
2. “Delete” – This will allow the user to delete any task if its no more needed or is mistakenly added. This deletion will completely remove the task from user's tasks list.

3. “Mark Complete” – This will strike-off the task once user marks it as completed. Please note that this action is irreversible. The task once marked as complete can only be deleted.
4. This table also shows the user the time span left for the task to expire or if the task has already expired some time ago.
5. The user shall even receive a mail on the task’s due date if its not marked as complete. This mail will be just a reminder to the user to complete the task that appears in the task list.
6. There’s even a button for exporting all the tasks. So if a user wants to get all his added tasks in a file, he can have it.
